EHS Event / Near Miss - Lessons Learned

Incident Overview

Incident Title:	Amneal Global – Finger Pinched Between Door Hinges and Frame
Date:	01-Apr- 2025
Incident Details:	An employee from another Amneal site sustained a deep fingernail injury when their finger was caught in an auto-closing door hinge while lifting material near the utility chiller area. First aid was provided on-site, and the employee was referred to a hospital for minor surgery. They returned to normal duty afterward.
Immediate Actions Taken:	N/A

Root Cause & Consequences

Root Cause(s):	• Inadequate inspection & preventive maintenance of door. • Protective grip/ guard not available at the door • Unaware about the hazards and hand position • Lack of alertness
Consequences:	The employee sustained a deep fingernail injury and required minor surgery. However, there was no lost time, and the employee returned to normal duty shortly after treatment.

Lessons & Prevention

Key Lesson Learned, Recommendations, and Preventive Measures:	• Report any abnormality observed (e.g. closure speed, gaps between hinges) while entry & exit through door. • Ensure alertness at the workplace. Avoid placing hands or body parts near pinch points. • Provide protective guards or grip between the door & hinges joints.
Recommendations and Follow-Up Actions:	• Evaluate high-risk doors and consider adding guards or signage. • Raise awareness through toolbox talks or safety briefings. • Regularly inspect auto-closing doors for safe function. • Train staff on pinch point hazards in utility areas.
